## DETAILED ACTION

### *Continued Examination Under 37 CFR 1.114*

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(c), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(c) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/22/09 has been entered.

### *Claim Rejections - 35 USC § 101*

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 22-40 are rejected under 35 U.S.C. 101 because they are not falling within one of the four statutory categories of invention. Supreme Court precedent<sup>1</sup> and recent Federal Circuit decisions<sup>2</sup> indicate that a statutory “process” under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim recites a series of steps or acts to be performed, the claim neither transforms underlying subject matter nor is positively tied to another statutory category that accomplishes the claimed method steps, and therefore does not qualify as a statutory process. For example the **prediction** method including steps of performing DC prediction, performing AC prediction and determining an overflow is of

sufficient breadth that it would be reasonably interpreted as a series of steps completely performed mentally, verbally or without a machine. **The Applicant has provided no explicit and deliberate definitions of "performing", "performing" or "determining" to limit the steps.**

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 22-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Youn (7,113,646) in view of Haskell et al (6,341,144) for the same reasons as set forth in Sections 9 of the previous office action, dated 1/24/08.

With respect to the newly added claim 40, Youn already discloses the concept of such common decision that if no overflow condition is to occur, encoding the current macroblock in the current data packet with AC prediction 66; and if the overflow condition is to occur,

encoding the current macroblock in the new data packet (e.g. with an updated Q scale factor) without AC prediction (e.g. using the same MV).

***Response to Arguments***

6. Applicant's arguments filed 6/22/09 have been fully considered but they are not persuasive. Applicant asserts on pages 9-10 of the Remarks that Youn fails to disclose encoding the current macroblock in a new data packet if overflow occurs. However, Figure 2 of Youn illustrates the concept of such common rate control technique wherein if an overflow condition is to occur, a new scale factor 80 is applied to re-quantize the macroblock 58 to form a new data packet.
